## QUALITY, HEALTH, SAFETY AND ENVIRONMENT POLICY

**PERAR SpA** has developed and consolidated its position in the market due to the **strategic vision aimed at finding the best solution for the customer** in terms of cost and quality of product and service offered, in order to reach his full satisfaction.

Aware of the importance to maintain its economic strength, PERAR has carefully undertaken planning and management of production costs, through the precise estimation of costs under the offer phase and computerization of production systems during the construction one.

At the same time, PERAR constantly develops technology to support quality of its products with **investment of human and material resources**.

PERAR sets every step necessary to provide the service and the product offered in order to fully achieve both the full compliance with customer and regulatory requirements.

In line with this, PERAR implements:

- a careful analysis and control of risks that may have an impact on the delivery and quality of the product, including organizational changes internally and coming from outside too;
- actions aimed at preventing the failure to achieve the customer's requirements

PERAR Top management has developed and constantly updated the **Quality Management System**, as a tool to establish and achieve its objectives and general guidelines, according to:

- UNI EN ISO 9001:2008
- API Spec Q1, 9th
- Directive 2014/68/UE PED - Module H
- Directive 2014/34/UE ATEX - Annex VIII
- IEC 61508 (SIL)

PERAR implements a systematic monitoring of the processes included in the Management System and sets specific objectives in order to realize the continuous improvement of the effectiveness of the System itself.

PERAR Top Management is also committed to provide and maintain a **safe and healthy work environment** for its employees and the third parties involved as well. PERAR recognizes the **centrality of occupational health and safety and the protection of environment**, in the performance of all business activities and it is committed to compliance with applicable legal requirements and other requirements that are intended to control its environmental aspects and health and safety. PERAR is also committed to achieve continuous improvement of business performance in terms of OHS risks prevention, pollution prevention and environmental protection in all work activities.

PERAR has set its targets that support its **HSE vision** and it is therefore committed to ensure the relevant communication and comprehension within the organization:

- Reduction of accidents and injuries through a more accurate assessment of the risks in the ordinary and extraordinary activities
- Detailed analysis of the OH&S hazards associated to all activities in order to identify and evaluate risks to health, safety and the environment and to set the effective measures to mitigate the risk
- Monitoring and reducing environmental effects of activities carried out by PERAR

- Involvement of all stakeholders, including suppliers and contractors, so that they are aware of their role in health, safety and environment protection and of the centrality of HSE issues in the leading and execution of the work

To implement these principles and objectives, PERAR Top Management has implemented an **occupational health and safety management system** according to BS OHSAS 18001:2007, integrating it with an Environment Management System according to ISO 14001:2004, harmonizing both of them with the Quality Management System.

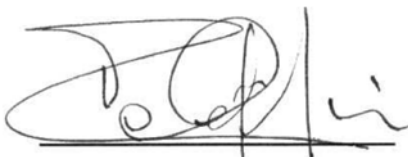

In this way, the whole organization can obtain benefit in terms of management and can pursue the continuous improvement of the Quality and HSE Management System.

In order to ensure the implementation of this policy, PERAR Top Management is constantly engaged:

- to recognize the economic importance of investment in health and safety and working environment;
- to prevent and manage any type of accident or emergency through the application of specific procedures;
- to train all staff on safety issues in the workplace and the environment;
- to involve internal and external partners in order to ensure the achievement of the objectives set for the quality, the promotion of health and safety at work and the protection of the environment;
- to ensure that the Policy for Quality, Health, Safety and the Environment is understood and implemented at all levels of the organization;
- to take an active role in the promotion and guidance of all activities having an influence on Quality, Safety and Health at Work and the Environment.

To do this, Top Management has set up a specific internal organizational structure that ensures:

- continuous monitoring of the integrated management system
- the application of company policy by identifying the correct operating procedures
- the effective application of the integrated management system and corporate policy adopted
